

DH-HM

DH-HM is a next-generation UAV which can fly up to 4hours and lift payloads up to 4Kg. The secret behind this DH-HM long flight duration is a mixture of Li-Po batteries and an in-built 2000w generator which sustains the UAV. This is called a hybrid drone because the generator is fueled by gasoline.

Specification

<i>Rotor Configuration</i>	- X6
<i>Power System</i>	- Hybrid Gasoline and Electric
<i>Empty Weight</i>	- 11 kg
<i>Max Take-off Weight</i>	- 20 kg
<i>Endurance</i>	- 4+ hrs
<i>Maximum Speed</i>	- 72 km/h
<i>Telemetry Range</i>	- 20 km
<i>Failure Features</i>	- Return to home location on communication failure and land on low battery
